

Spring Boot Coding Assignment Week 13 by Dylan Decker

Overview

Over the next three weeks you will write code to build a Pet Store REST API. In this week's exercise you will write code for the first part of the Pet Store REST API.

Objectives

This assignment has the following objectives:

- Show that you can properly create an Entity Relationship Diagram (ERD), complete with entities and relationship lines.

- Demonstrate how to create a Maven project.

- Show how to modify the generic pom.xml with content created in the Spring Initializr Website.

- Demonstrate that you can create Java Persistence API (JPA) entities.

- Show understanding of Spring JPA configuration.

- Demonstrate that you can create a Spring Boot main class that starts Spring Boot and configures itself as a Web application.

- Show that the JPA entities can be used by Spring JPA to create schema tables complete with relationships.
